

PAST. PRESENT. FUTURE.

HÅG Futu

We couldn't have named the chair HÅG Futu if we didn't take responsibility for the future. The name HÅG Futu is inspired by the word 'future'. HÅG is aware of its responsibility to society and offers future-oriented sitting solutions, manufactured from sound materials in an efficient factory. This, combined with a timeless, comprehensive design, provides an innovative chair you will enjoy for a long time.

HÅG Futu is manufactured using a minimum of resources. Only seven different material types are used in total, including the textile. Almost all materials are recyclable. However, what really counts in order to minimize the environmental strain of a product in a lifetime perspective, is to use recycled materials, i.e. materials that already have been used in a previous product. At HÅG we use as much recycled plastic, steel and aluminium as technically possible. The result is products with record low "carbon footprints" and energy consumption. In common with HÅG's other chairs, the environmental profile for HÅG Futu will also be documented in an Environmental Product Declaration (EPD) based on ISO 14025. This documentation may also be used to compare HÅG Futu's environmental performance with corresponding products with an EPD.

HÅG is also at the forefront in terms of minimizing the use of chemicals. We consciously avoid environmentally-harmful substances such as composites, integral foam, PVC, chrome and glue. This means that we spare the environment and that we have a product that doesn't emit harmful gases or substances during use. In common with HÅG's other chairs, HÅG Futu will also be equipped with a GREENGUARD indoor climate certificate as proof of its contribution to a healthy indoor climate in your premises.

Environmental facts:

- 97% recyclable*
- More than 45% of the materials are previously recycled, that is to say materials that have been used in previous products*.
- GREENGUARD certificate will be provided shortly after start of manufacture
- Environmental declaration in accordance with ISO 14025-EPD, will be provided shortly after start of manufacture
- Supplied with a 10 year guarantee
- HÅG has acquired certificates that guarantee that all electricity used during manufacture is from Norwegian hydropower
- HÅG is ISO 9001 and 14001 certified, and is registered with EMAS (Eco Management Audit Scheme)
- No foam in backrest.
- FutuKnit produced with no scrap whatsoever. Each cover knitted to perfect shape & size.

If you are looking for an environmentally-friendly chair, you should check the chair's "carbon footprint", i.e. how much CO₂ it represents from cradle to grave. If you are concerned with taxing the environment to the least possible degree, you can safely select chairs from HÅG. This is due to our numerous environmental measures: low weight, few components, environmentally-efficient materials and long life span provide our chairs with a carbon footprint that is barely visible.

* Preliminary figures in anticipation of environmental product declaration/EPD.
